Student Age Analyzer

```
import java.util.Scanner

public class StudentAgeAnalyzerRivas {

    public static void greetUser() {
        Scanner input = new Scanner(System.in); // Declaration of scanner
        System.out.println("=== Student Age Analyzer === ");
        System.out.print("What is your name?: "); // Input
        String name = input.nextLine();
        System.out.print("What is your age?: "); // Input
        double age = input.nextDouble();

        String result = ageAnalyzer(name, age);
        System.out.println(result);
        input.close(); // Closes Scanner
    }

    public static String ageAnalyzer(String name, double age) {
        if (age <= 12) { // Process
            return("Hi " + name + ", you are a Child"); // Output
        } else if (age <= 19) {
            return("Hi " + name + ", you are a Teenager"); // Output
        } else if (age <= 59) {
            return("Hi " + name + ", you are an Adult"); // Output
        } else {
            return("Hi " + name + ", you are a Senior Citizen"); // Output
        }
    }
```

VICTORY

CamScanner

```
public static void main(String[] args){
    greetUser();
  }
}
```
